Outline

- How to edit a Wikipedia article
- Image resources
- Citations
Neutral point of view – All Wikipedia articles and other encyclopedic content must be written from a neutral point of view, representing significant views fairly, proportionately and without bias.
No original research – Wikipedia does not publish original thought: all material in Wikipedia must be attributable to a reliable, published source.
Verifiability – Material challenged or likely to be challenged, and all quotations, must be attributed to a reliable, published source. In Wikipedia, verifiability means that people reading and editing the encyclopedia can check that information comes from a reliable source.
If available, academic and peer-reviewed publications are usually the most reliable sources.

Other reliable sources include:
- university-level textbooks
- books published by respected publishing houses
- magazines
- journals
- mainstream newspapers
